Хрестоматія англійською мовою для студентів

Дослідження операцій: моделі оптимізації для прийняття рішень

Київ - 2007

Contents

Part 1. OR: history, principle, problems and mathematical models 9
1.1. Time Line for Operations Research (1936 – 2006) 10
1.2. Introduction 13
1.3. The early years 15
1.4. Lanchester's Theory of Warfare 17
1.5. "Father of Operational Research" P. Blackett 19
1.6. Early post-War developments 20
1.7. OR in USSR 21
L.V. Kantorovich 21
Mathematics in Economics: Achievements, Difficulties, Perspectives 22
1. Specific peculiarities of the problems considered 23
2. The new methods 25
3. Difficulties 27
4. Perspectives 29
E. S. Wentzel 30
N.N. Moiseev 31
V. S. Nemchinov 32
V. M. Glushkov 32
G. E. Pukhov 35
1.8. The rise of systems analysis 35
P. Morse and G. Kimball 37
J. von Neumann 40
G. Dantzig 41
The end of the Cold War and the advent of a new strategic environment 43
Retrospect and prospect 44
1.9. The desktop computing revolution 44
1.10. Spreadsheet revolution 45
GRG2 in Microsoft Excel Solver 48
Forward and Central Differencing 49
Optimality Conditions 50
Multiple Locally Optimum Points 50
Spreadsheet revolution and OR/MS 51
Advantages of spreadsheets 52
Disadvantages of spreadsheets 53
What can we learn? 54
1.11. What is Operations Research? 55
1.12. OR and management 57
Roger Bacon and Scientific Method 57
Elements of scientific method 60
Relationship with mathematics 65
Frederick Taylor and scientific management 66
Henry Gantt and Gantt chart 70
What is Operations Management? 71
Service management 71
History of Operations Management 73
1.13. Elements of OR 76
OR and the Ancient Art 76
OR as the packaged art 76
OR's Practitioners 77
A black box on steroids 77
1.14. OR and Games 78
Fear of Trying 78
BOAs 78
Imagination versus Knowledge 79
Commercial Games 80
Business model 81
Process Control and Program Trading technology 82
Hired Guns 83

1.15. What is Optimization? 84
Terminology 85
Operations research techniques 86
The Operations Research Process 86
Excel Models and OR 90
1.16. Mathematical modeling and Optimization 92
What is Mathematical Programming? 94
What can Mathematical Programming Do? 94
Building an Model 95
Major subfields of MP 97
Techniques 97
1.17. Simulation 98
Terminology 98
Complete LP model 100
1.18. Economics and Operations Research 100
The common history 101
The different perspectives of Economics and OR 102
Where economists and operations researchers have common interests 104
Economics and OR have common roots 108
1.19. Introduction to Genetic Algorithms 109
Part 2. Optimization: problems and spreadsheet models 112
2.1. Design and Use of the Microsoft Excel Solver 113
Background and Design Philosophy of the Excel Solver 114
The Architecture of Spreadsheet Programs 115
The Expectations of Spreadsheet Users 115
The Desires of the Spreadsheet Vendors 115
The Role of Bundled Spreadsheet Solvers 116
User Interface and Selection of Objective, Decision Variables and Constraints 116
Decision Variables and the Guess Button 117
Constraints 117
Solver Options 118
Model Extraction and Evaluation of the Jacobian Matrix 119
Solving Linear Problems 120
Automatic Scaling and Related Pitfalls 120
Linearity Test and Related Pitfalls 121
Solving Nonlinear Problems 122
Automatic Scaling 123
Non-smooth Functions 124
Solving Problems with Integer Constraints 125
Saving the Solution and Producing Solver Reports 127
Use of the Solver in Industry 129
Problem Size 130
OR/MS Training 130
Economic Value 131
Use of the Solver in Education 131
2.2. Resource Allocation Problem 134
General Model 134
Model of optimization problem 132
2.3. Four steps in implementing mathematical model in a spreadsheet 135
1. Organize the data for the model on the spreadsheet 135
2. Reserve separate cells in the spreadsheet to represent each decision variable in the MM 136
3. Create a formula in a cell in the spreadsheet that corresponds to the objective function in the algebraic model 136
4. For each constraint, create a formula in a separate cell in the spreadsheet that corresponds to the left-hand (LHS) objective function the constraint 136
2.4. Optimization with the Excel Solver 138
Defining an optimization model 138
Spreadsheet solvers 140
Installing and running Excel Solver 140

2.5. Optimal product mix problem 143
Statement 143
Building of model 140
Mathematical model 146
Input this model into Solver 148
Why select these options? 151
Does a Solver model always have a solution? 151
What does it mean if set values do not converge? 153
2.6. Ralph Gomory and Integer Linear Programming 154
From linear to integer linear programming 155
Gomory's cutting plane method for integer programming 156
2.7. Portfolio Optimization: A Quadratic Programming Problem 156
Problem Formulations 157
Minimize Variance subject to Given Return 158
Maximize Return subject to Given Variance 158
Combining the Models: Balancing Risk and Return 159
2.8. Two Mines Company problem 159
Guessing 160
Two Mines optimal solution 161
Integer Linear Model 163
2.9. Allocation machines problem 164
2.10. Workforce scheduling problem 168
2.11. Blending or Mixing problem 172
2.12. Aggregate Planning Problem (Inventory management) 175
2.13. Region selection problem 177
The Integer Programming Solution 180
2.14. Network modeling problem 182
2.15. Transshipment Distribution Problem 186
2.16. Recycling plan problem 192
2.17. Transportation problem 197
2.18. Capital budgeting problem 204
2.19. Traveling salesman problem 207
Part 3. Decision Analysis 213
3.1. Decision analysis 214
General Approaches of Decision Making 214
Characteristics of decision problem 214
3.2. Problem of optimal locations 215
Payoff matrix for this problem 216
3.3. Decision rules 217
3.3.1. Deterministic methods 217
The maximax decision rule 217
The maximin decision rule 218
The minimax regret decision rule 219
3.3.2. Probabilistic methods 220
Expected Monetary Value 221
Expected Regret 221
The Expected Value of Perfect Information 222
3.4. Decision Tree 223
Building a Decision Tree in TreePlan 223
Decision tree for our decision problem 227
3.5. Multistage decision problem 230
A Multistage Decision Tree 231
Analyzing risk in decision tree 233
3.6. Monte Carlo methods 235
3.7. Monte Carlo simulation 240
3.8. Monte Carlo simulation in Excel 242
3.9. A corporate health insurance example 247
Appendix 1. Great Moments in HistORy 261
Appendix 2. Термінологічний словник 267
